

HAPPY DIABETIC FOOT ULCERS PATIENTS

OVERVIEW

Diabetic foot ulcer occurs due to a number of factors that comprises of peripheral neuropathy, mechanical changes in conformation of the bony architecture of the foot and atherosclerotic peripheral arterial disease. All these factors occur at a higher frequency and great intensity in the diabetic population.

Foot ulcers usually occur under big toes and the balls of your feet, and can affect the feet down to the bones.

PATIENT STORY

MOHAMMAD MOINUDDIN

Came from Bangladesh for Liver Cirrhosis, CKD, Diabetes & Diabetic foot Ulcer Treatment

The whole procedure, service, and doctors are all satisfactory. I'm satisfied with the treatment and the level of their service. Doctors were helpful enough to help me with the best treatment. It is not a surgical and heavy procedure, minimum pain, and best treatment. I would definitely recommend Stem Cell Care to other patients looking for treatment.

HAPPY PATIENTS

SAMI MOHAMMAD ALFARAJ

came from Kuwait to India for Type 2 Diabetes

Latest researches have revealed that Umbilical Cord Mesenchymal Stem Cells can differentiate into nerve cells, neovascularise (formation of blood vessels) immunomodulation when injected into the affected area, thereby improving symptoms and prolonging lives. Steroids and other disease modifying drugs cannot cure all the symptoms and are essentially aimed at managing only specific symptoms. Again, the concern of the critical side effects of drugs is present. With MSC treatment, there is no such concern.

In StemCellCareIndia, abounding network of hospitals offer diabetes stem cell treatment hospital these utilize unique technology of Mesenchymal stem cells extracted from Wharton's jelly (WJ) for treating MS. WJ-MSCs offers cost-effective and pain-free collection method that may be cryogenically stored, and is extremely favorable for tissue engineering purpose. They might help in the three prominent ways, prevent damage, repair damage and develop new medicines

HAPPY PATIENTS

DR. REGINALD SATYA PRAKASH PRASAD

came from Fiji Island for Macular Degeneration Treatment

What is the mode of operation of stem cell treatment for age-related macular degeneration?

Prior to the discovery of stem cells, the only treatment option for AMD was a surgical operation. Stem cell technology has changed the procedure, rendering it the only non-surgical method for undoing the damage and stopping AMD progression.

Stem cells are naive cells in the body that have the ability to differentiate into any cell in multiple organs. Medical research has used stem cells' ability to cure a number of degenerative diseases, including but not limited to AMD. Global research has shown that stem cells are promising candidates for the easy replacement of degenerated or damaged RPE layers with fresh cells, which is believed to discourage or reverse vision loss.

LAXMI DEVI

Came from Jharkhand for Diabetes & CKD Treatment

Stem cells are a naturally occurring component of the human body with the remarkable capacity to locate and regenerate damaged tissues. The complete development of the findings will take up to four months after stem cell therapy. During this time, the patient continues to notice new changes. There's still no chance of rejection or negative side effects. The entire procedure takes just a few hours and is extremely fast, painless, easy, and clean.

Patients with chronic renal disease who receive stem cell therapy are likely to have positive results, giving them new optimism for enhancing their quality of life and also leading to less frequent hemodialysis or preventing dialysis. Other things to expect after stem cell therapy for renal dysfunction are: Total CKD progression halting Damaged Nephrons Regeneration Improved volume of creatinine Improved filtration Normal dialysis is not needed Refined renal function Better hormone management Enhanced ion balance

Patient Brother Shares His Experience After Stem Cell Therapy for Type 1 Diabetes at SCCI

Patient Story

Diagnosis: Type 1 Diabetes
Patient Name: Pradeep Nehra
Age: 17 years
Nationality: Indian
Location: Stem Cell Care India

Condition:

A 17-year-old man presented with a history of Type 1 Diabetes for the last 4 years. He agonized with sudden nocturia along with insentience in 2018. Conservative treatment is going on inj human mixtard insulin (30:70). After didn't accept any development, he wishes to undergo stem cell treatment for his problem.

Medical History:

History of Type 1 Diabetes for 4 years. Recently he suffered from Tuberculosis and managed the same at a higher center. Now, he is free from TB. During childhood, he agonized from pneumonia.

Causes of Type 1 Diabetes:

Type 1 diabetes is alleged to be instigated by an autoimmune reaction (the body attacks itself by mistake). This reaction extinguishes the cells in the pancreas that make insulin, named beta cells. This procedure can go on for months or years before any indications look.

Some individuals have certain genes (traits approved on from parent to kid) that make them more likely to grow type 1 diabetes. However, many of them won't go on to have type 1 diabetes even if they have the genetic factor. Activation in the atmosphere, such as a virus, may also play a portion in developing type 1 diabetes. Diet and existing habits don't cause type 1 diabetes.

Stem Cell Treatment for Type 1 Diabetes

A 17 years old man is facing Type 1 Diabetes for the last 4 years. He came with his cousin to SCCI for taking stem cell treatment for treating their problem. Earlier, he had gone to several cities to take conservative treatment for their problem. But these treatments didn't help to cure the disease.

Through YouTube, he knew about stem cell treatment and Stem Cell Care in India. Then he came to SCCI for taking stem cell treatment. During the treatment, he had given multi-vitamin and stem cell therapy. He is very satisfied with the treatment and also suggests other undergo stem cell treatment for the same problem.

PATIENT STORY

Patient Shares His Experience after Stem Cell Therapy for Type 1 Diabetes at SCCI

Patient Story

Diagnosis: Type 1 Diabetes
Patient Name: Pradeep Nehra
Age: 17 years
Nationality: Indian
Location: Stem Cell Care India

A 17 years old man, Mr. Pradeep Nehra is facing Type 1 diabetes for the last 4 years. At that time, his condition was very bad. He was admitted to the hospital for 3 days and then taken insulin. His sugar level is 200-250 during fasting. He knew about stem cell treatment through YouTube and then he decided to take this.

His experience at SCCI is very good. He is very satisfied with the treatment and also recommends others to come here for taking stem cell treatment. The team behind SCCI retains the independence needed to combine the best products, doctors, and facilities to guarantee the best possible advice and outcomes. The professional provides progressive, reasonable healthcare to upsurge the quality of life with leading-edge, next-generation treatment providers, exclusive products, and services that are consolidative, safe, and effective.

At SCCI, Type 1 Diabetes treatment contains a unique combination of therapies including stem cell therapy and supportive therapy. The duration of action is based on the patient's sternness and state and it ranges from 3-4 days.

HUSSAIN JEHAD

came from Saudi Arabia for Diabetes Type 1 Treatment

My grandson is 4.8 years old. His name is Hussain and we are from Saudi Arabia. Our life shattered when we came to know that he is suffering from diabetes Type 1 at such a tender and early age. We decided to opt for stem cell treatment so that he can get healed as soon as possible in a very safe and effective way. We admitted him in Stem Cell Care India for the treatment. After the treatment, my lil grandson is completely healed. The doctors at this hospital treated and operated him successfully. We are thankful to staff of Stem Cell Care India and we are very appreciative that they showed so much care and concern for us. Thanks everybody!

HAPPY PATIENTS

DHAN DEVI Came from Delhi for Type 2 Diabetes Treatment

Dhan devi is 37 years in age and she had been diagnosed with Type 2 diabetes. When she decided to opt for stem cell therapy at Stem Cell Care India, she was admitted in the hospital. She was given 5 injections of mesenchymal stem cells. All the injections were given by IV route. Total of 100 million cells were injected, each injection containing 25 million cells. Mrs. Dhandevi used to have pain in her whole body before the treatment. However, after treatment, she is quite happy and is able to get rid of the pain. She is able to live a happy and normal life. Before the treatment, her sugar level used to be 200 plus, but, after the treatment it dropped to 110. There is no swelling and inflammation in her feet now and also she is getting better in health. She is very happy with the team of the hospital.

ABDUL RAHIM came from Bangladesh for CKD Treatment

Mr. Abdul was suffering from acute ankylosing-spondylitis since past 12 years. Aching joints, constrained movements and stiffness in the body were his way of life. For your information, Mr. Abdul doesn't have any family history of joint sicknesses. His symptoms began with abrupt onset of the back pain, which went on to be severe with the entire body aches, up to the range that he could barely walk or if he could, he began walking like an old man. Although the preliminary X-ray analysis showed nothing, might be because essentially it takes numerous years to exhibit changes related with the spine. Subsequently, he had to visit rheumatologists, who confirmed after almost 3 years that he is suffering from AS. His treatment routine involved diet plan, some oral medicines and constrained sports activities. However, as per Mr. Abdul's observation the medications were just anti-inflammatory and turned out to be palliatives. Furthermore, these medications welcomed other side-effects such as inflammation, bloating, headaches, etc. As a result, with the evolution of time, the symptoms got worse with more tauten and sore back and other medical side-effects. Although Abdul was very reluctant to let this chronic disease take over him, and urgently wanted some new treatment or contemporary medicine, which will help him to regain the life again. With hordes of research and comprehensive understanding of stem cells, he opted to be treated with stem cells under the supervision of Global Stem Cell Care's team.

Ever since, Mr. Abdul underwent treatment, he experienced fabulous improvement in his complications. During follow-up and pain management program, he recognized that there is no longer any rigidity, the pain was pretty tolerable and he could ultimately get out of bed and also at times could go for some floor workouts. Mr. Abdul is very positive and is grateful to the team of the clinic for all the support and amenities.

PATIENT STORY

Patient with Diabetes Retinopathy Share His Experience after Stem Cell Therapy at SCCI

Patient Story

Condition:

Mr. Nirmal Chandra, a 55 years old man presented with a history of loss of vision in both eyes due to diabetes retinopathy. He was unable to see small size letters and fluid strings in the vision. But after different treatments, he wishes to undergo stem cell therapy.

Medical History:

He had diabetes mellitus type 2 for the last 25 years. But in 2020, he suffered from diabetic ketoacidosis and managed at a similar higher center. He also suffered from a gall bladder stone that was removed in 2012. In October 2020, he faced a mild stroke along with left-sided body weakness and now medicines are going on for the same.

Cause of Diabetes Retinopathy:

Diabetic retinopathy (die-uh-BET-ik ret-i-NOP-uh-thee) is a diabetes difficulty that affects the eyes. It's triggered by damage to the blood vessels of the light-sensitive flesh at the back of the eye (retina).

At first, diabetic retinopathy might cause no signs or only mild vision difficulties. But it can lead to sightlessness.

Diabetic retinopathy is instigated by high blood sugar because of diabetes. Over time, having too much sugar in your blood can harm your retina — the portion of your eye that perceives light and sends signals to your brain over a nerve in the back of your eye (optic nerve).

Diabetes indemnities blood vessels all over the body. The harm to your eyes starts when sugar blocks the tiny blood vessels that go to your retina, instigating them to leak fluid or bleed.

Stem Cell Therapy:

Mr. Nirmal Chandra is facing the loss of vision in both eyes because of diabetic retinopathy since 2020. Due to blurred vision, he is unable to see small size letters and fluid strings on the vision. He took conservative treatments and several other treatments for the same problem but didn't get any improvement in his health.

After doing research, he lastly wishes to go through stem cell therapy for their problem and came to Stem Cell Care India. At SCCI, he started to take stem cell therapy. He is very happy with the hospital facility and services. The team behind Stem Cell Care India retains the independence needed to combine the best doctors, and facilities to guarantee the best possible outcomes. He also recommends others who come across SCCI take stem cell treatment for the same problem.

Stem Cell Care India

OUTCOME DIABETIC FOOT ULCERS PATIENTS

PATIENT STORIES

Denilson Van Kats

56 years old, Netharland, 2022

Hi, I firstly want to start by thanking the amazing minds at Stem Cell Care India for helping me out during my treatment. They not only assisted me in having the best treatment but also helped me with the international travel-related issues. I am surprised how much I was struggling and as soon as I got them to give me some assistance, all the struggle just disappeared. I would suggest everyone who is traveling to India for Stem Cell Therapy consider Stem Cell Care India. They are great at what they do..

Nelline

43 years old, US, 2022

I am Nelline from US. I received required multiple infusion of stem cells at Stem Cell Care India in November 2018. Before this, I was a diabetic patient with my blood sugar levels ranging 340-370, a couple of foot sores which were open for around a year and some difficulty with my kidneys as well. Within the weeks after taking the stem cell procedure at SCCI, my average sugar levels plunged to 120-160. In case if I failed to control my sugar consumption, occasionally the sugar level would rise, however, it descends rapidly the following day. At the same point in time, I lost a great mass of body weight and also observed an enhanced body complexion. My kidneys and other organs are also wholly normal now. Both the diabetic foot ulcers cured within 20 days after the stem cell therapy at SCCI. Thanks a lot!

Eddie A. Whitehead

48 years old, California, 2020

I recently received stem cell therapy for my foot ulcer on the advice of my wife and this therapy seems to have been working wonders as my condition has become a lot better. Also, I have no complaints related to my hospitalization as that went by In a breeze of comfort. All the healthcare workers there were so kind and helpful to me. I am sure that they are the best clinic I have ever visited.

Thomas

60 years old, USA, 2020

At the age of 60, my mother encountered the problem of foot ulcers. We consulted the team of experts at StemCellCareIndia and with their treatment, my mother is fit and fine now.

PATIENT STORIES

James

60 years old, USA, 2021

It was just unexpectedly that James learned about Stem Cell Care India. He had been suffering a diabetic ulcer on the bottom heel of his right foot for 8 months and the treatment he had been getting had not been remedial for the wound. Doctors recommended amputating his foot. He hopped at the chance to have a dialogue with surgeons at Stem Cell Care India. There, the doctors saw that he suffered from osteomyelitis, an infection of the bone that had arisen from the foot ulcer. They recommended instantaneous operation to remove the disease-ridden part of his bone, colossal antibiotics to treat the infection, followed by stem cell therapy. They familiarized stem cell treatment for James, which they executed at the clinic. These particular stem cells, called the mesenchymal stem cell (MSC), have been found to increase wound curing, when implemented with a biomaterial made from collagen and entrenched into the wound. Along with the stem cell treatment, nurses at the clinic washed James' wound and dressed and enfolded it for prime healing. The clinic has made massive difference in his treatment.

Terra

43 years old, London, 2021

The last thing Terra anticipated was to be diagnosed with type 2 diabetes. She worked out, ate well and kept her weight controlled. There had to be some error. Terra asked her doctor to repeat the assessments, but the outcomes were the same. To aid her cells absorb glucose, she requires regular insulin inoculations. She vaccinates the hormone four times a day and must frequently measure her blood sugar levels even more often. Devotedly following this regimen has kept her active for 18 years, but insulin is not a permanent remedy. Also, her condition deteriorated when she started experiencing diabetic foot ulcers. Though her diabetes was brought under control but her ulcers were becoming more frequent in occurrence. She contacted SCCI in India for stem cell treatment for diabetic foot ulcers and after the treatment, she saw a lot of improvement in her condition.

PATIENT TESTIMONIALS

PATIENT NAME	AGE	DISORDER	COUNTRY	YEAR OF TREATMENT	FOLLOW-UP FEEDBACK
Ejaz Khan	45	Sports injury	Afghanistan	2017	Shakes in the hands gone. Able to get out of the wheelchair.
Berley	6	Autism	Canada	2018	Speech and cognitive abilities improved. Balance amended while sitting.
Justin	32	Muscular dystrophy	Brazil	2017	Balance and feet strength improved. Was able to get out of wheelchair unaided.
Mohd. Kasim	72	Type 2 Diabetes	Kuwait	2019	100 % bladder control was there and patient's sugar levels were under control.
Wasim Jafar	39	Motor Neuron Disease	Ghana	2020	Muscle strength improved. Able to live a better and healthier life than before.
