

# **HAPPY KIDNEY DISORDER PATIENTS**

# OVERVIEW

The kidneys -the two bean sized organs filter out wastes and fluid from your blood. When the kidneys cannot filter the blood the way they should, kidney diseases occur

People with high blood pressure and diabetes are at a higher risk of kidney disease.

## ABDUL RAHIM came from Bangladesh for CKD Treatment

Mr. Abdul was suffering from acute ankylosing-spondylitis since past 12 years. Aching joints, constrained movements and stiffness in the body were his way of life. For your information, Mr. Abdul doesn't have any family history of joint sicknesses. His symptoms began with abrupt onset of the back pain, which went on to be severe with the entire body aches, up to the range that he could barely walk or if he could, he began walking like an old man. Although the preliminary X-ray analysis showed nothing, might be because essentially it takes numerous years to exhibit changes related with the spine. Subsequently, he had to visit rheumatologists, who confirmed after almost 3 years that he is suffering from AS. His treatment routine involved diet plan, some oral medicines and constrained sports activities. However, as per Mr. Abdul's observation the medications were just anti-inflammatory and turned out to be palliatives. Furthermore, these medications welcomed other side-effects such as inflammation, bloating, headaches, etc. As a result, with the evolution of time, the symptoms got worse with more tauten and sore back and other medical side-effects. Although Abdul was very reluctant to let this chronic disease take over him, and urgently wanted some new treatment or contemporary medicine, which will help him to regain the life again. With hordes of research and comprehensive understanding of stem cells, he opted to be treated with stem cells under the supervision of Global Stem Cell Care's team.

Ever since, Mr. Abdul underwent treatment, he experienced fabulous improvement in his complications. During follow-up and pain management program, he recognized that there is no longer any rigidity, the pain was pretty tolerable and he could ultimately get out of bed and also at times could go for some floor workouts. Mr. Abdul is very positive and is grateful to the team of the clinic for all the support and amenities.

## Mr. Tejinder Singh Came from Gujrat for Stem Cell Therapy for Chronic Kidney Disease at Stem Cell Care India

### Patient Story

Diagnosis: Chronic Kidney Disease  
Patient Name: Mr. Tajender Singh  
Age: 67 years  
Nationality: Indian  
Treatment Location: SCCI

#### Condition:

Around 1-1.5 years ago, Mr. Tajender Singh was diagnosed with chronic kidney disease. He found the raised level of serum creatinine levels in his blood. He was undergone conservative medical treatment but didn't get effective improvement. Later, he wishes to undergo stem cell treatment for his problem.

#### Patient's Medical History:

Mr. Tajender Singh was diagnosed with hypertension around 20 years ago. Then now, he started to take medicine for his problem. He was also diagnosed with Hepatitis B in his childhood but treated successfully. But whenever he goes for a blood check, he shows a slight positive titer for HBsAg antigen. In 2005, he was diagnosed with mild MI that has been preserved and managed well therein under medical care.

#### Family History:

There is no anybody in his family with hypertension and chronic kidney disease. Both parents are also healthy.

#### Causes of Chronic Kidney Disease

Chronic kidney disease (CKD) is a sluggish and progressive loss of kidney role over several years. Eventually, an individual may grow kidney failure. Treatment purposes are to stop or slow the development of kidney dysfunction by governing the underlying cause. Diabetes and high blood pressure are the most communal causes of chronic kidney disease (CKD). Your healthcare provider will look at your health history and may do tests to find out why you have kidney disease. The cause of your kidney illness may disturb the type of treatment you accept.

#### Stem Cell Therapy for CKD

Mr. Tajender Singh had a history of hypertension (HTN) associated with chronic kidney disease. He was undergone several treatments but didn't get effective outcomes. After that, he wishes to undergo stem cell therapy for his kidney disease which brought him across Stem Cell Care India. After the treatment, he feels improvement and doesn't have any problems. The doctors working with the hospital have delivered successfully delivered thousands of stem cell treatment plans. They specify in next-generation stem cell treatment and have many years of experience. The team behind the treatment holds the independence needed to include the best products, doctors, and

facilities to assure the best possible advice and outcomes. They provide advanced, responsible healthcare to upsurge the quality of life with leading-edge, exclusive products, and services that are integrative, safe, and effective.

To know more about chronic kidney disease and its effective treatment at Stem Cell Care India, please contact us and visit their site.

### HAPPY PATIENTS

## LAXMI DEVI Came from Jharkhand for Diabetes & CKD Treatment

Stem cells are a naturally occurring component of the human body with the remarkable capacity to locate and regenerate damaged tissues. The complete development of the findings will take up to four months after stem cell therapy. During this time, the patient continues to notice new changes. There's still no chance of rejection or negative side effects. The entire procedure takes just a few hours and is extremely fast, painless, easy, and clean.

Patients with chronic renal disease who receive stem cell therapy are likely to have positive results, giving them new optimism for enhancing their quality of life and also leading to less frequent hemodialysis or preventing dialysis. Other things to expect after stem cell therapy for renal dysfunction are: Total CKD progression halting Damaged Nephrons Regeneration Improved volume of creatinine Improved filtration Normal dialysis is not needed Refined renal function Better hormone management Enhanced ion balance

We came for treatment for my son to this centre. This was for CKD. Overall experience was good and doctor was very knowledgeable on subject and treatment plan. Hospital is equipped with all required staff to handle the patients problems. Overall experience on treatment and procedure was nice. I am hopeful that this will give good results on my son condition.

# **OUTCOME KIDNEY DISORDER PATIENTS**

**Lorra**

**31 years old, UK, 2016**

Lorra's life went into depression when she was detected with a chronic kidney disorder. She is now thankful to the team of StemCellCareIndia to treat her disease successfully with the help of stem cell therapy.

**Kennedy**

**39 years old, Canada, 2017**

Kennedy had Chronic Kidney Disease and contacted Stem Cell Care India for treatment. After the treatment, today Kennedy is able to live a full and active life with his family.

**Iqbal**

**71 years old, Afghanistan, 2019**

Iqbal was diagnosed with kidney disorder 3 ago. He was facing a lot of problem. Len, to end his troubles, he decided to visit India to undergo stem cell therapy with SCCI. After the treatment, his condition improved a lot.

**Chhaya**

**42 years old, Rishikesh, 2020**

Chhaya was detected for diabetes and CKD. She was under medicine for a very long time. After undergoing stem cell treatment, there is a lot of improvement in her condition. Thanks to the team of Stem Cell Care India.

**Robert**

**57 years old, US, 2018**

Robert was diagnosed with Chronic Kidney Disease in 2016. He suffered a lot and then decided to undergo stem cell treatment in India with Stem Cell Care India. He is very happy with the results as his condition improved a lot after the treatment. He is able to live a disease-free life now.

# Iqbal

**34 years, Dhaka, 2022**

Iqbal Muhammad from Dhaka: I was diagnosed with kidney disorder 5 ago. I was facing a lot of problem. I referred a lot of doctors but everything went in vain. In December 2016, I was kept on dialysis but my condition was not much improving. Although, I was able to become much active but my condition was not improving as expected. I had low iron and hb on micera and iron and also my vitamin d levels were very low. Then, from a friend I got to know about StemCellCareIndia. Stem Cell Care India, began my treatment through the umbilical cord tissue derived Mesenchymal Stem Cells. I was admitted in the hospital for 5 days during which the concerned doctor inoculated Mesenchymal Stem Cells through Intravenous Injection accompanied by Stem Cell Activator which aids the patient to lower his creatinine, egfr and potassium level. After 4.5 months of the treatment, my dialysis frequency got reduced significantly. Now I am very happy with the treatment at Stem Cell Care India.

# Ibrahim

**28 years, South Africa, 2022**

He was diagnosed with membrane nephropathy 3yrs ago with a creatinine of 250 egfr 33. At that time, he got suffered from gout also. 2015 December he had started dialysis egfr 8 potassium of 7 started to stabilize getting his level in his order and his energy levels back In 2016, he was on dialysis 2 times per week 4 hrs, Egfr 5 and potassium 5.5 and very stable and quiet active

Low iron and hb on micera and iron, Pth levels high 1980 parathyroid, Vitamin d levels low

SCCI, started his treatment through the Umbilical Cord Tissue derived Mesenchymal Stem Cells. He was admitted in the hospital for 4 days during which Doctor injected Mesenchymal Stem Cells through Intravenous Injection along with Stem Cell Activator which helps patient to lower his creatinine, egfr and potassium level. After 4 months of the treatment his dialysis frequency was reduced. Now the Patient is very happy with the treatment of SCCI

# Alisha

**22 years, Australia, 2021**

I am Father of Alisha, she is only 22 years old unfortunately was suffering from kidney failure from last 2 years and continuously on dialysis. I have contacted to stemcellcareindia for her treatment through stem cell therapy in matter of 6 hours got all the details about stem cell therapy. We came in India on 25th of June – 2016 for the treatment.

Doctor started the procedure from next day and totally stay in the hospital is 7 days in which she took the stem cell therapy through intra venous injection after complete evaluation. Umbilical cord derived Mesenchymal stem cell was very helpful for my daughter and currently, she is no requirement of dialysis. It's the big achievement of modern era of treatment without any side effect my daughter is completely relief and her self-confident is also increase.

# Parina

**36 years, Bangladesh, 2022**

I am Parina H. James. My life went into depression when I was detected with a kidney disorder. I am thankful to the team of StemCellCareIndia to treat my disease successfully with the help of stem cell therapy.

# Prakash

**65 years, Delhi, 2021**

Prakash Aiyappa from Kerala: My uncle is 65 years old. He was detected for diabetes and CKD. He is under medicine for a very long time. Recently, doctor suggested him to keep him on dialysis for every 3 days. Yesterday he was on dialysis for the 5th time. Means, still new. His creatinine level is 9.8. Albumin, RBC, HGB and Lymphocytes levels are also very low. My uncle had consistently resisted requirements for a dialysis and desired to opt for stem cell therapy so to circumvent the necessity of dialysis in future as well. We came to Stem Cell Care India where his treatment started. We are very happy with the staff and the doctors here. Also, my uncle's condition is improving day by day with the stem cell treatment. Thanks to the team of Stem Cell Care India.

# Rahim

57 years, Bangladesh, 2020

Hi, my fathers' name is Abdhur Rahim Chan Chesty and we are from Dhaka, Bangladesh. He was suffering from Kidney problems from many years. We took him to a lot of doctors for the treatment but he wasn't able to get any relief. After that we searched about stem cell treatment through internet and our doctor also recommended undergoing this treatment via Stem Cell Care India in Delhi. When we came to Delhi for stem cell treatment for Chronic Kidney disease in Delhi, the team of Stem Cell Care India greeted us in a very amiable manner. After the treatment, my father is feeling a lot better. His kidneys are able to function more suitably than before. We want to thank the team of SCCI for all the support and right guidance that was given to us. We are fully satisfied and happy with their treatment protocols and staff.

# Mufizur

42 years, Bangladesh, 2022

I am Mufizur Raheem from Bangladesh senior accountant in government bank, my wife was suffering from kidney failure and doctor advised her for kidney transplant. My friend Naseem told me about stem cell therapy in India for kidney disorder and have contacted to stem cell care India.

Doctor asked me to send the complete documents on given email id and after sharing of documents he called me and advised to come in India for the treatment. Guest officer was already available on Airport to pick up. We went in the hospital and Dedicated stem cell specialist Doctor was ready to help us and from next day stem cell therapy started. Total stay in the hospital was 7 days. My experience was good with them as decided earlier on email. 1 dedicated Doctor and nurse was available only for our case. Supporting staff help me to visit the Delhi City after the treatment.

# Parminder

33 years, Australia, 2021

Parminder Singh from Austraila had Chronic Kidney Disorder whose blood urea was 171 and the Serum creatinine was 3.87. Due to CKD he was having dialysis twice a week. His family member contacted to Stem Cell Care India for his treatment. SCCI, started his treatment through the Umbilical Cord Tissue derived Mesenchymal Stem Cells. He was admitted in the hospital for 4 days during which Doctor injected Mesenchymal Stem Cells through Intravenous Injection along with Stem Cell Activator which helps patient to lower his creatinine and urea level. After 3 months of the treatment his dialysis frequency was reduced. Now the Patient was very grateful to stem cell therapy which was done by SCCI.

# Farah

41 years, Bangladesh, 2021

I am Farah Khan from Bangladesh working as a senior accountant in government bank, I was suffering from kidney failure and doctor recommended me for kidney transplant. My friend Aqib told me about stem cell therapy in India for kidney disorder and I then contacted stem cell care India. I had Chronic Kidney Disorder wherein my blood urea was 181 and the Serum creatinine was 3.86. Because of CKD in the later stages, I was having dialysis twice a week. I was also spotted with membrane nephropathy 3yrs ago with a creatinine of 250 egfr 33. At that time, I even had to suffer a lot of emotional and physical turmoil. 2016 December I had started dialysis egfr 8 potassium of 7 started to even out getting my level in order and the energy levels back In 2017 starting, he was on dialysis 2 times per week 4 hrs, Egfr 5 and potassium 5.5 and very stable and marginally active. There were low iron levels and hb on iron. Also, Pth levels were high 1980 parathroid and Vitamin d levels were low.

My family member communicated to Stem Cell Care India for my treatment. Stem Cell Care India started my treatment via the Umbilical Cord Tissue derived Mesenchymal Stem Cells. I was admitted in the hospital for 5 days during which doctor inoculated Mesenchymal Stem Cells via Intravenous Injection accompanied by Stem Cell Activator which helps patient to lower his creatinine and urea level. After 2.5 months of the treatment, my dialysis frequency was decreased. Today, I am very grateful to stem cell therapy which was done by Stem Cell Care India.

# Mariam

39 years, UK, 2022

Hi, I am Mariam from UK. Last year, I was suffering from acute kidney issues that were hampering my normal course of life a lot. I went in for treatment via antibiotics as I was a critical CKD patient, my serum Creatinine had reached grave levels. I had unfailingly resisted requests for a dialysis and wanted to do stem cell therapy so to circumvent the need of dialysis henceforth in future as well.

Stem Cell Care India's protocol for CKD dictates the inoculation of mesenchymal stem cells, straight to the kidneys via catheter (Intra-arterial Administration via catheter). However, it is imperative for the safety of the patient for the creatinine levels to be less than 4 to eradicate any risk posed by the dye essential to be used for an angiography. In this situation, I was requested to undergo a dialysis to lessen the creatinine levels, but I was adamant to get the cells injected via Intravenous Administration (IV). The idea was to give the cells by IV and see how much advantage I can derive from it. If I do derive advantage and the creatinine levels do drop, the hospital staff had planned to repeat the therapy for further drops till the level reaches in controlled confines to deliver cells intra-arterial way. I was discharged in the evening and reported no post technique complications. This obviously shows us that the headway of the disease had stopped and the drop in creatinine levels specifies start of the healing process of the impaired kidneys. Further follow-ups were planned in one month and contingent on the condition of my health, another round of therapy will be advised.
